AvadyConnect® kit

New

FABRICATION FRANÇAISE

Connected devices for simplified pool management

The AvadyConnect kit enables the remote control and coordination of water treatment equipment settings, to ensure easy pool management, via a dedicated web interface available at www.avadyconnect.com.
It comprises a radio communication unit, and a circuit board mounted on Avady Pool devices loaded with version 3.19 firmware. (Devices with an earlier firmware version may be sent to the Avady Pool workshop to be updated.)

For professional users, there are numerous advantages:
- **Proactive management**: the study of settings and historical data enables any deviations to be identified and corrective action taken prior to the customer becoming aware of the deviation.
- **Customer loyalty**: transparency, creation of a trust-based relationship, additional sales, and so on.

Circuit board installed in the device

AvadyConnect web interface

Remote control and coordination of:
- Regulation of pH and chlorine levels
- Low level of treatment products*
- Temperature*
- Operation of the filtration pump and booster pump*
- Lighting*
- Equipment status, e.g. cover*
